

TESTOSTERONE REPLACEMENT THERAPY

Testosterone plays an integral role in numerous aspects of overall health and well-being. While it is perhaps best known for supporting sex drive and sperm quality, testosterone is involved in everything from bone mass to muscle growth. However, many men believe that their hair loss may be caused by excess of testosterone. Learn more about the relationship between testosterone and hair growth--and whether you should consider taking a testosterone level test.

ABOUT US

Element Aesthetics Wellness Clinic is a medical practice which specializes in a variety of services ranging from Non-Invasive Skin Treatments, IV Vitamin Therapies, Sexual Dysfunction Therapy, Hormonal Replacement Therapy and more. Our clinic's professional medical team treats the body, and the mind, by educating patients on how to maintain a healthy lifestyle.

WHAT IS YOUR HAIR TELLING YOU?

Your hair says a lot about your overall health. When the body goes into crisis mode, hair growth is stunted to redirect energy to other cells throughout the body. So, hair loss is oftentimes the first sign of trouble. While age is definitely a factor of hair loss, other factors, such as hormonal imbalance emotional stress, medications and hair care products can also lead to thinning of the hair and even male pattern baldness. The best way to get to the root of the problem is to determine the underlying cause.

IMPORTANCE OF HORMONAL BALANCE

NON SURGICAL HAIR RESTORATION TREATMENTS

Today, there are a variety of hair restoration options for slowing down and (even stopping) there also are methods for regrowing hair. If you're not quite ready for a hair transplant, here are six non-surgical options to consider. But first, keep in mind that the treatment that's best for you will depend on a variety of personal factors, including type of hair loss, causes, and your medical history. Always consult with your doctor before starting any treatment.

- Scalp Micropigmentation
- Platelet Rich Plasma with Microneedling
- Healthy, Balanced Diet
- Testosterone Hormone Replacement Therapy
- Topical Creams and Sprays

Platelet-Rich Plasma

PRP Hair Loss Treatment for men works with your blood, processing platelet rich plasma (PRP), which is then injected directly into the scalp, triggering hair growth and providing an effective, natural remedy for hair loss.

PTD-DBM Topical Spray

A follicle regeneration treatment. More specifically, is a peptide-based topical scalp treatment which inhibits the follicle shrinking action of the body's hormones and enzymes effectively rescuing the follicle at a stem cell level. Treatment with PTD-DBM both prevents hair loss and promotes the growth of new hair follicles.
